

GENERAL COMMENTS ON THE MONTH.

Summer seems to have got lost this year!! July was rather a poor month with temperatures depressed on normal values, all those in the air being below normal by as much as 1.8C, only one day, the 4th being hot, and with a "near-frost" on the 13th., giving the coolest July since 1988.

Rainfall was a tenth above average with 14 days of rain, itself 12% above normal, with a total rain duration of 45 hours, well above expectation.

In slight compensation, sunshine was a tenth up on average at 204 hours, only one day being totally sunless. The sunniest day was the 5th with 13.2 hours of almost continuous sunshine.

Thunder was reported once, as was hail, but there was no occurrence of fog.
